

Jon Nicolosi

Final Project for CS496

My apps core function is to retrieve an authentication token from Facebook's API, display information retrieved from my Facebook profile, make status updates containing my current GPS coordinates, and then edit those status updates to remove the GPS coordinates.

I used the Facebook SDK integrated with Android Studio. To make GET and POST requests, I used the GraphRequest method which allows me to make requests to the Graph API where all Facebook user data lives
